Visneto XL is integrated into existing calendar / booking system

Visneto XL is a new and user-friendly system that shows optional bookings on a display at reception or unmanned entry to workplace. Customers who previously have an internal conference booking system can now connect to Visneto XL and get a simple and educational overview of all meeting rooms.

Quick overview

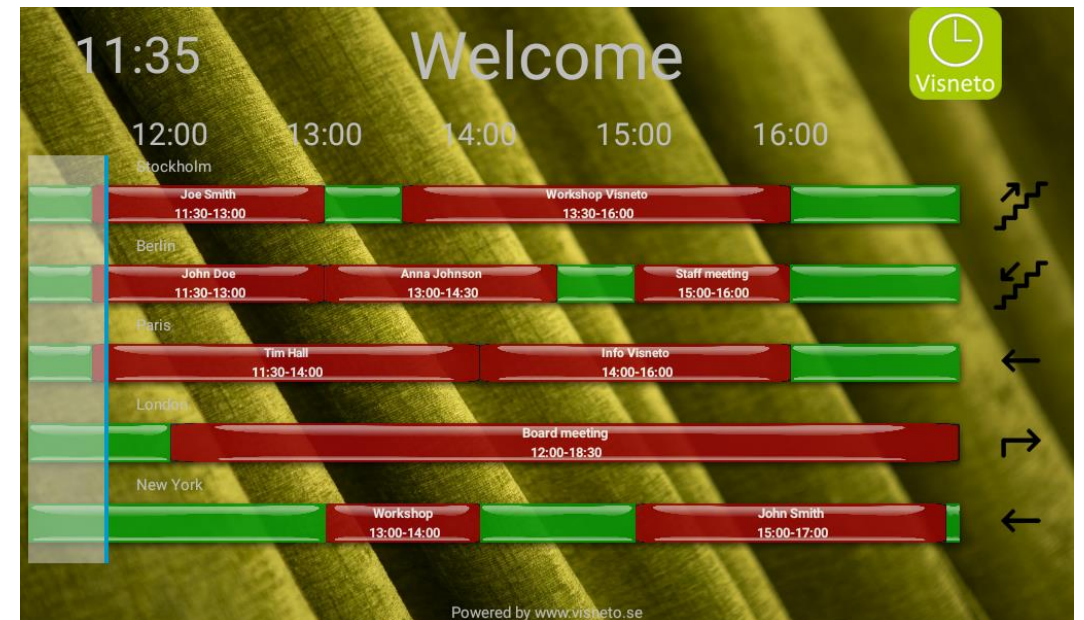

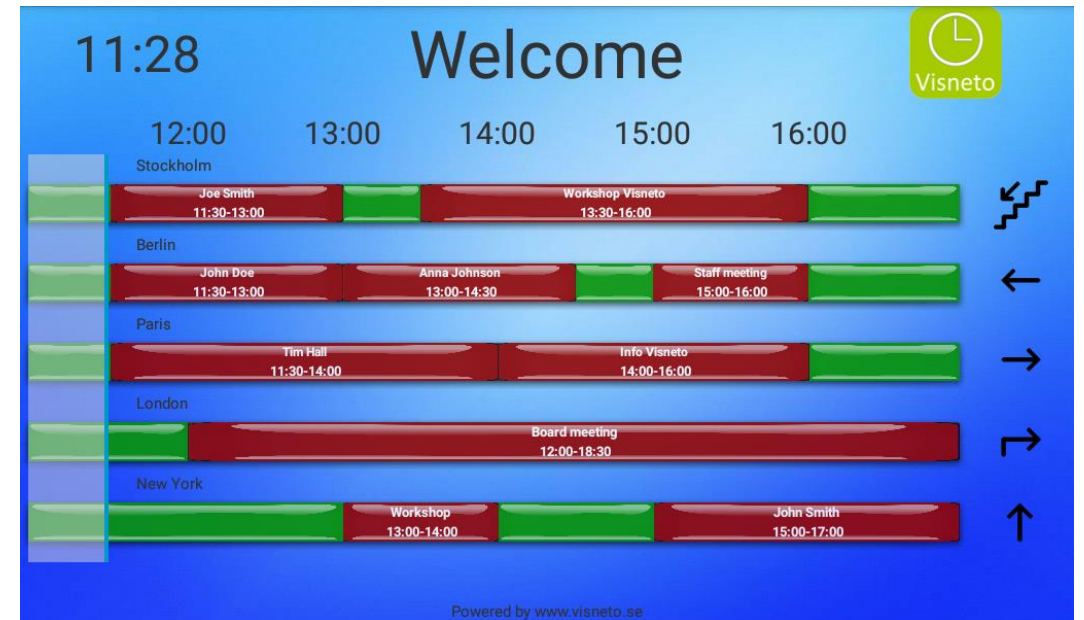

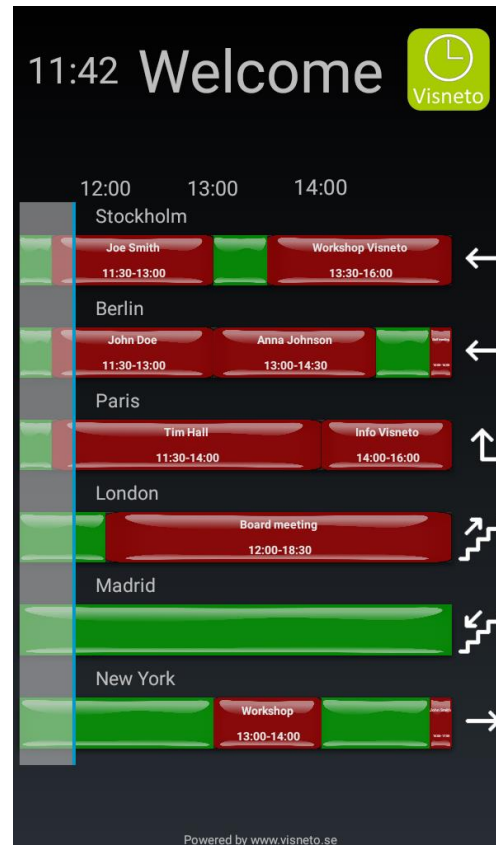

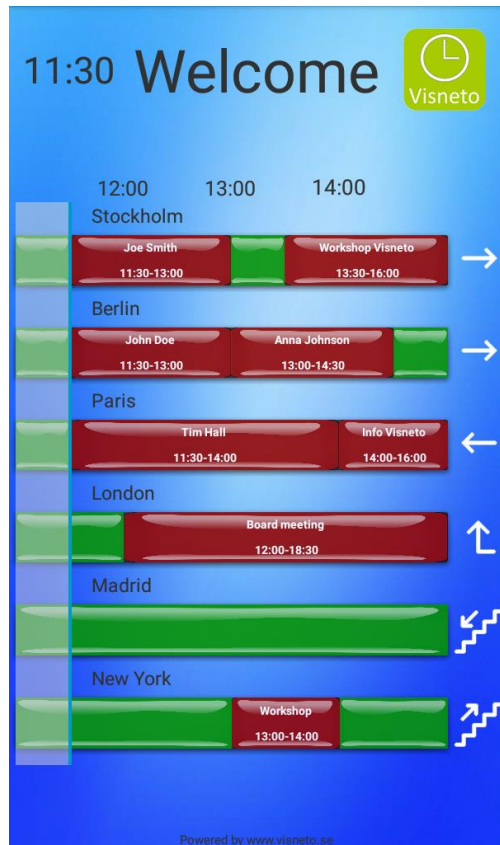

- Needs no computer / player beside the screen. (this feature is based on a screen with built-in Android player)
- Optional portrait or landscape display format (this feature is based on a screen with built-in Android player that allows both types of viewing)
- Connect by wifi & connect only electricity. Easy to change location without hassle-free connections. (this feature is based on a screen with built-in wifi)
- Standalone and completely independent of the reservation system used today outside the conference rooms. Visneto XL connects to the server.
- Add rooms from both Outlook or Google server.
- Rename the rooms, arrange the names nicer. Example: The name "smallmeetingroom" from the server can be placed as the "Little Room" on the reception screen.
- Click in the rooms you want to see on the screen you are working with. You do not have to choose all the rooms on the server .
- Change the order of the rooms so they come in the order you wish.

- Place the rooms on multiple screens & choose which order as above.
- Choose Dark or Bright background.
- Choose your own background.
- Choose a logo.
- Choose a welcome text such as "Welcome".
- Select to view the clock and date or select the option that is desired
- Choose what should be in the boxed red field on the screen. Choices that are available as on / off are: Meeting Description, Organizer, Meeting Time.
- Optional size on screen with Android based software.
- Set optional on / off closure with Example Philips D-Line Professional Screen (Weekdays & Time On / Off).

- Outlook & Google compatible.
- One-time charge for license.

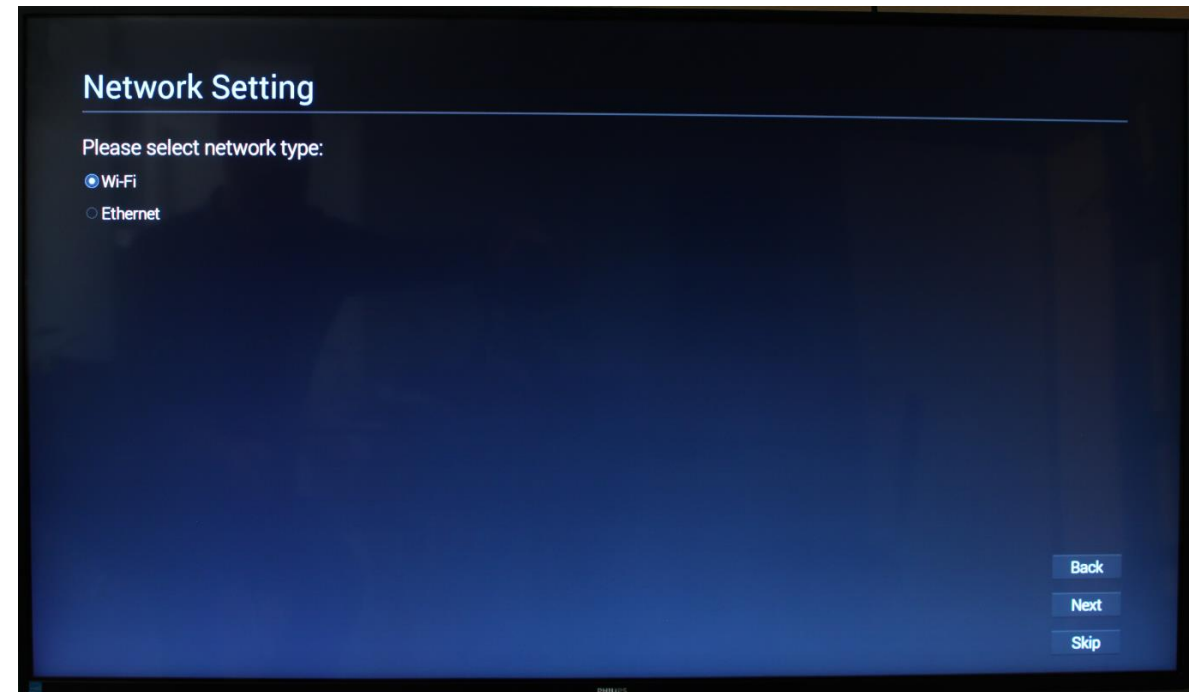

Installation Philips D-line

1. Select your language

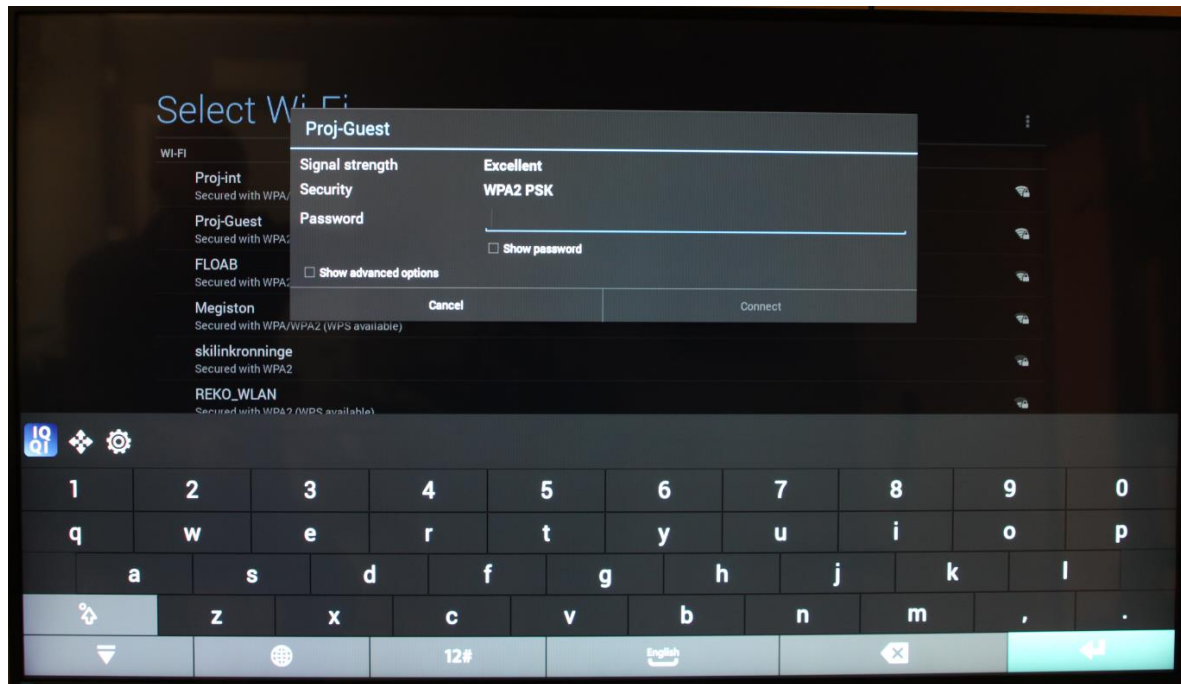

2. Select Wi-Fi or Ethernet, select next

3. Select your network and connect

4. Select skip, if you do not want to import Android settings from another screen
