

Visneto

Visneto

Managing and booking meeting rooms just got simpler with the Android booking solution from Visneto and Philips new 10" touch screen display.

Philips 10" screen includes a LED Bar which can change color depending on if the meeting room is available or not, giving your office a professional look while ensuring all meetings go according to plan.

Visneto makes workplace coordination easy and room reservation more efficient.

Visneto syncs with your existing calendar or Exchange calendar, which makes it easy to manage. Visneto also gives you the option to book meetings in real-time with your phone, computer or Visneto touch tablet outside the meeting room.

Through simple settings you have the option to customize and personalize your Visneto to make it even more exclusive and time saving. The Android display you use can be placed vertically or horizontally.

News

In Q1 2017 the new Receptions/ collection screen is introduced. When this screen is up and running you get a overview over all meeting rooms on one screen.
